

# Hose Reinforcement Machines

For Rubber and Plastic Hoses

- Smooth-operating variable speed AC drive
- Clean, quieter ball bearing throughout requires far less maintenance than greasy bushings
- External caliper brake system eliminates the need to disassemble machine to maintain old-style internal shoe brake
- Long-lasting brake shoes operate for years without replacement
- Consistent stopping times unaffected by brake wear
- Requires less floor space; no need for a servicing deck
- Single and low-profile double deck machines
- Available with 4, 6 or 8 feeds

## Update existing machines!

*See the reverse side to learn how to cut costs and increase productivity with our unique rebuilding service*

# Machine Rebuilding Service

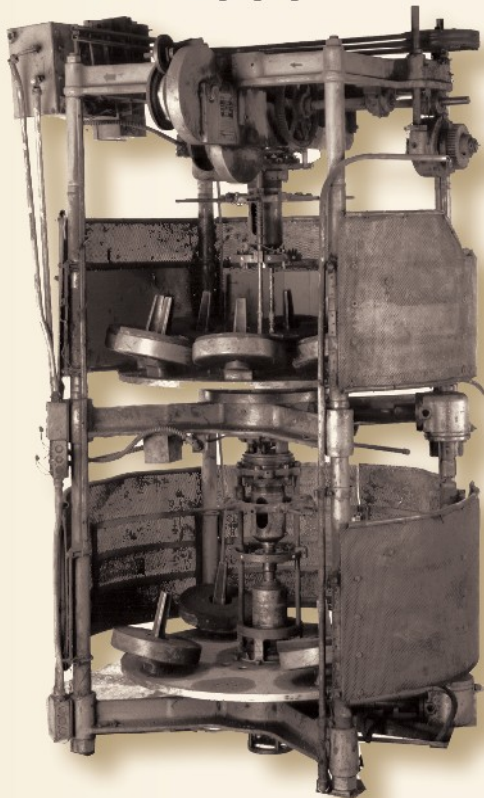

Ours is not a repair service. Instead we upgrade your machine so that it operates smoother and cleaner with significantly improved reliability.

We install many of the advanced features found in new Precision Products machines. For example, we provide a variable speed AC drive; we replace grease-spewing bushings with clean, long-lasting ball bearings.

We install pre-set Precision Products heads, eliminating the need for complicated, time-consuming adjustments. You benefit from less maintenance time and more consistent patterns. All of which adds up to greater productivity. And you'll have fewer replacement parts to inventory.

**Call us to discuss a new machine or the upgrading of existing equipment.**
